

Centrifugal Fans belt driven

Issue 1.2 EN

NICOTRA||Gebhardt

fan|tastic solutions

Nicotra Gebhardt S.p.A. (Italy) certifies that ADH-E fans of the E0, E2, E4, E6 and E7 versions, from sizes 0160 to 0560, RDH-E fans of the E0, E2, E4, E6 and E7 versions, from sizes 0180 to 0560, ADH and RDH fans of the L, R, K, K1 and K2 versions, from sizes 0630 to 1000, shown herein are licensed to bear the AMCA Seal.

Nicotra Gebhardt GmbH (Germany) certifies that RZR fans of the 11, 12, 15 versions, from sizes 0355 to 1000, shown herein are licensed to bear the AMCA Seal.

The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.

Air performance with Installation Type "A" ("with free outlet") and that of the twin versions G2L, G2R, G2K, G2K2, G2E0, G2E2, G2E4, G2E7 in any installation type is not AMCA licensed.

Nicotra Gebhardt stands for:

- Maximised flexibility and minimised design effort for customers, because all radial fan casings have identical dimensions – no matter what kind of impeller geometry
- Top product quality and shorter delivery times – thanks to state-of-the-art production technology
- Energy efficiency through comprehensive system know-how

A strong provider for many optimal solutions:

The Nicotra-Gebhardt portfolio

When it comes to radial fans, we are the first people you should talk to. From belt-driven radial fans to plugfans, it's all there in our product portfolio. We offer the largest, most comprehensive range of products in this area – and of course the matching services.

ADH-E / ADH

double-inlet
forward-curved impeller geometry

RDH-E / RDH

double-inlet
backward-curved impeller geometry

RZR rotavent

double-inlet
hollow aerofoil impeller geometry

When everything fits: 100% compatible product series

To us, perfection in our product portfolio means that all product series in the area of encased radial fans are attuned to one another and are 100% compatible in their dimensions.

How did we do it?

By using an identical design for the connection dimensions of every fan size in our newly developed series ADH-E and RDH-E and carefully coordinating our options and accessories.

In this way, we have standardised and harmonised our product portfolio in all relevant areas.

Well designed, easy to install, economical – The compact base frame from Nicotra-Gebhardt

Greater system efficiency

A system that saves space, time, and money – in an air handling unit or any other application: our compact base frame offers decisive advantages:

- The frame lengths have been optimised and adjusted for the casing position and motor installation height to achieve the smallest possible overall height and length
- Exact, optimised coordination of all components, all the way through to installation, adjustment and testing
- Suitable for all fans of the series ADH-E0, RDH-E0 and RZR-11 up to size 0500

proSELECTA II

proSELECTA II is a technical selection program that allows you to configure your own individually designed fan. It provides you with the opportunity to choose from the entire range of fan types and their associated options.

Simple and reliable selection

The result from **proSELECTA II** is the provision of all the technical data for your fan, including sound level data, dimension specifications and accessories. Apart from that, as a registered user, your purchase prices are provided. Additionally fully dimensioned drawings in DXF format are available, which can be downloaded and transferred straight into your CAD system.

So that you can be sure

Models and options that are technically not permissible, are automatically excluded in proSELECTA II. So there is no chance that you will configure a "wrong" device option.

What else is important to you

During the fan selection process, you can choose any of the standardised ATEX options.

Free registration and many advantages

You can register as a proSELECTA II user with us, which enables us to offer you faster order processing. What this means for you is:

- The complete configuration of your fan with its associated system accessories and belt drive layout.
- The possibility to produce fans that operate via a frequency inverter.
- The option of saving your own fan configuration on our server.
- The opportunity to modify your saved configuration, even over the phone to your Nicotra-Gebhardt representative.

High performance centrifugal fan ADH

- double inlet for belt drive
- impeller with forward curved blades of galvanised sheet steel

- Volume up to 300,000 m³/h
- Pressure up to 2,200 Pa

High performance centrifugal fan RDH

- double inlet for belt drive
- centrifugal impeller with backward inclined blades

- Volume up to 290,000 m³/h
- Pressure up to 3,500 Pa

High performance centrifugal fan RZR *rotavent*

- double inlet for belt drive
- high performance impeller with backward curved hollow section true aerofoil blades

- Volume up to 300,000 m³/h
- Pressure up to 3,500 Pa

Fittings / Accessories

- complete system accessories
- miscellaneous fittings

Description

- technical description
- operating limits

**Working towards perfection:
The ADH-E and ADH series**

By further developing sizes 0160 to 0560 of our successful ADH model range, we have created a product series which boasts a whole host of improvements. The result is the ADH-E generation, one which will overcome the challenges of any application.

During development, we paid particularly close attention to four factors: air volume flow, pressure, energy efficiency and noise. These aspects are the key to success: all of the models are on a par with or superior to their predecessors in terms of these parameters.

New choice of models

Whether you are looking for single or twin fans, the new ADH-E series offers impressive further improvements in terms of functionality and potential uses, whatever the application.

The ultimate in compatibility

Minimised design effort for you means that:

- All accessories and equipment are carefully coordinated and compatible to further product ranges like RDH-E / RDH (backward curved centrifugal fans) and RZR (hollow-airfoil blade geometry-®).
- The connection dimensions for ADH-E (sizes 0160 to 0560) are identical with the corresponding models from the ADH range.
- The models for sizes ADH 0630 to 1000 remain unchanged.
- All ADH E models up to size 0500 are compatible with the new compact base frame – a unique feature which makes completing your system ultra simple and affordable!

Top quality for performance and a long service life!

Alongside an intelligent construction, aspects such as the quality of materials and workmanship play a crucial role in ensuring a long life cycle. That's why we have made the casing of the new ADH-E even sturdier by means of a standing seam construction. In addition to this, the way in which the blades are attached to the impeller has been optimised and the shafts have been galvanised for more effective corrosion protection – further factors which significantly increase the service life of this range.

The product range at a glance:

The technical specifications of the ADH-E and ADH series

The standard series are designed for permanent ventilation at up to +80C resp. +100C. The specifications conform to accuracy class 2 according to DIN 24166.

ADH-E and ADH G2E series

- Sizes 0160 up to 0560
- Scroll of galvanized sheet steel with standing seam and straight cut off
- New cylindrical impeller with forward-curved blade geometry
- Galvanized shaft
- Volume up to 120.000 m³/h
- Pressure up to 2.200 Pa

ADH and ADH G2 Series

- Sizes 0630 up to 1000
- Lap jointed scroll of galvanized sheet steel with Pittsburgh-Seam and V-cut off
- Volume up to 300.000 m³/h
- Pressure up to 1.800 Pa

The ADH-E and ADH range of models:

The right fan for every specification!

Depending on the fan size, the ADH-E and ADH series have up to 5 mechanical versions of the single fan and up to 4 additional twin fan options. In this way, we ensure that we have the perfect model for all requirements and any application.

Version	Description	Figure
ADH E0 / ADH L	Lap jointed scroll without feet and discharge flange. Light duty bearing execution with pressed steel housing/strut assemblies.	
ADH E2 / ADH R	Lap jointed scroll with rectangular side frame, without discharge flange. Light duty bearing execution with pressed steel housing/strut assemblies.	
ADH E4 / ADH K	Lap jointed scroll with heavy duty reinforced side frames, without discharge flange. Medium duty bearing execution with cast iron pillow block, mounted on a robust pedestal.	
ADH E6 / ADH K1	Lap jointed scroll with heavy duty reinforced side frames, without discharge flange. Medium-heavy duty bearing execution with cast iron pillow block, mounted on a robust pedestal.	
ADH E7 / ADH K2	Lap jointed scroll with heavy duty reinforced side frames, without discharge flange. Heavy duty bearing execution with single-piece resp. split-type plummer block, mounted on a robust pedestal.	

Version	Description	Figure
ADH G2E0	The two single fans ADH E0 or ADH L are fitted together to a robust assembly by means of 3 U-channels. Both impellers are fitted on a common shaft supported by 3 bearings.	
ADH G2E2 / ADH G2R	The two single fans ADH E2 or ADH R are fitted together to a robust assembly by means of 3 angle bars. Both impellers are fitted on a common shaft supported by 3 bearings.	
ADH G2E4 / ADH G2K	The two single fans ADH E4 or ADH K are fitted together to a robust assembly by means of 3 angle bars. Both impellers are fitted on a common shaft supported by 3 bearings (sizes 0250/-0630) or the fans have separated shafts being connected by a elastic coupling (sizes 0710/-1000).	
ADH G2E7 / ADH G2K2	The two single fans ADH E7 or ADH K2 are fitted together to a robust assembly by means of 3 angle bars. Both impellers are fitted on a common shaft supported by 3 bearings (sizes 0250/-0630) or the fans have separated shafts being connected by a elastic coupling (sizes 0710/-1000).

ADH E0-0160/-0560

ADH L-0630/-0710

ADH G2E0-0160/-0500

Specifications

High performance centrifugal fan ADH E0 / ADH L

Double inlet, belt drive.

Lap jointed scroll of galvanised sheet steel assembled through a standing-seam (Sizes 0160/-0560) or by Pittsburgh lockforming (sizes 0630/-0710).

Multi-position feet and discharge flange as an option.

Impeller with forward curved blades of galvanised sheet steel, balanced in accordance to ISO 1940.

Straight cut off at fan discharge (sizes 0160/-0560), from size 0630 with V-cut off.

Noise tested, maintenance free, self aligning radial insert ball bearings, mounted in pressed steel housing/strut assemblies with rubber interliners.

Performance data in accordance to DIN 24 166 tolerance class 2.

Twin fan arrangement

Twin fan arrangement

High performance centrifugal fan ADH G2E0

The two single fans ADH E0 are fitted together to a robust assembly by means of 3 U-channels. Both impellers are fitted on a common shaft supported by 3 bearings.

Fan data

Fan type	
Volume flow	q_v	m^3/h
Total pressure increase	p_f	Pa
Static pressure	p_{sf}	Pa
Air density at fan inlet	ρ_1	kg/m^3
Air medium temperature	t	$^\circ\text{C}$
Shaft power	P_a	kW
Efficiency	(η_a)	
Speed	N	1/min
Sound power level (A weighted)	L_{WA}	dB
Weight	m	kg

Fittings / Accessories

- Multi-Position feet
- Discharge flange
- Discharge flex with flexible sleeve
- Inlet guard
- Discharge guard
- Shaft guard for free shaft end
- Matching flange
- Inspection door
- Drain plug R 1/8"
- Increase corrosion protection
- Shaft made of stainless steel
- Nuts and bolts and fastening elements made of stainless steel
- Aluminium inlet cone
- Copper inlet cone, or equipped with a copper strip (from size 0630)

ADH E2-0160/-0560

ADH R-0630/-0710

ADH G2E2-0160/-0560

ADH G2R-0630

Specifications

High performance centrifugal fan ADH E2 / ADH L

Double inlet, belt drive.

Lap jointed scroll of galvanised sheet steel assembled through a standing-seam (Sizes 0160/-0560) or by Pittsburgh lockforming (sizes 0630/-0710), discharge flange as an option.

Rectangular side frame of galvanised steel.

Impeller with forward curved blades of galvanised sheet steel, balanced in accordance to ISO 1940.

Straight cut off at fan discharge (sizes 0160/-0560), from size 0630 with V-cut off.

Noise tested, maintenance free, self aligning radial insert ball bearings, mounted in pressed steel housing/strut assemblies with rubber interliners.

Performance data in accordance to DIN 24 166 tolerance class 2.

Twin fan arrangement

Twin fan arrangement

High performance centrifugal fan ADH G2E2 / ADH G2R

The two single fans ADH E2 or ADH R are fitted together to a robust assembly by means of 3 angle bars. Both impellers are fitted on a common shaft supported by 3 bearings.

Fan data

Fan type	
Volume flow	q _V	m ³ /h
Total pressure increase	p _F	Pa
Static pressure	p _{sF}	Pa
Air density at fan inlet	p ₁	kg/m ³
Air medium temperature	t	°C
Shaft power	P _a	kW
Efficiency	(η _a)	
Speed	N	1/min
Sound power level (A weighted)	L _{WA}	dB
Weight	m	kg

Fittings / Accessories

- Discharge flange
- Discharge flex with flexible sleeve
- Inlet guard
- Discharge guard
- Shaft guard for free shaft end
- Matching flange
- Inspection door
- Drain plug R 1/8"
- Increase corrosion protection
- Shaft made of stainless steel
- Nuts and bolts and fastening elements made of stainless steel
- Aluminium inlet cone
- Copper inlet cone, or equipped with a copper strip (from size 0630)

ADH E4-0200/-0560
ADH K-0630/-1000
ADH G2E4-0250/-0560
ADH G2K-0630/-1000
Specifications**High performance centrifugal fan ADH E4 / ADH K**

Double inlet, belt drive.

Lap jointed scroll of galvanised sheet steel assembled through a standing-seam (Sizes 0200/-0560) or by Pittsburgh lockforming (sizes 0630/-1000), discharge flange as an option.

Welded heavy duty reinforced side frames, coated.

Impeller with forward curved blades of galvanised sheet steel, balanced in accordance to ISO 1940. Straight cut off at fan discharge (sizes 0200/-0560), from size 0630 with V-cut off.

Monobloc pedestal cast iron bearings with relubrication nipple, mounted on a robust pedestal, integrated, self aligning radial insert ball bearings fixed by eccentric clamp. Performance data in accordance to DIN 24 166 tolerance class 2.

Twin fan arrangement**Twin fan arrangement****High performance centrifugal fan ADH G2E4 / G2K**

The two single fans ADH E4 or ADH K are fitted together to a robust assembly by means of 3 angle bars. Both impellers are fitted on a common shaft supported by 3 bearings (sizes 0250/-0630) or the fans have separated shafts being connected by an elastic coupling (sizes 0710/-1000).

Fan data

Fan type	
Volume flow	q_v	m^3/h
Total pressure increase	p_f	Pa
Static pressure	p_{sf}	Pa
Air density at fan inlet	ρ_1	kg/m^3

- Aluminium inlet cone
- Copper inlet cone, or equipped with a copper strip (from size 0630)

ADH E6-0315/-0560

ADH K1-0630/-0900

Specifications

High performance centrifugal fan ADH E6 / ADH K1

Double inlet, belt drive.

Lap jointed scroll of galvanised sheet steel assembled through a standing-seam (Sizes 0315/-0560) or by Pittsburgh lockforming (sizes 0630/-1000), discharge flange as an option.

Welded heavy duty reinforced side frames, coated.

Impeller with forward curved blades of galvanised sheet steel, balanced in accordance to ISO 1940.

Straight cut off at fan discharge (sizes 0315/-0560), from size 0630 with V-cut off.

Monobloc pedestal cast iron bearings with relubrication nipple, mounted on a robust pedestal, integrated, self aligning radial ball bearings fixed by conical sleeve.

Performance data in accordance to DIN 24 166 tolerance class 2.

Fan data

Fan type	
Volume flow	q_V	m³/h
Total pressure increase	p_F	Pa
Static pressure	p_{sF}	Pa
Air density at fan inlet	ρ_1	kg/m³
Air medium temperature	t	°C

- Nuts and bolts and fastening elements made of stainless steel
- Aluminium inlet cone
- Copper inlet cone, or equipped with a copper strip (from size 0630)

ADH E7-0500/-0560

ADH K2-0630/-1000

Specifications

High performance centrifugal fan ADH E7 / ADH K2

Double inlet, belt drive.

Lap jointed scroll of galvanised sheet steel assembled through a standing-seam (sizes 0500/-0560) or by Pittsburgh lockforming (sizes 0630/-1000), discharge flange as an option.

Welded heavy duty reinforced side frames, coated.

Impeller with forward curved blades of galvanised sheet steel, balanced in accordance to ISO 1940. Straight cut off at fan discharge (sizes 0500/-0560), from size 0630 with V-cut off.

Size 0500

Monobloc pedestal cast iron bearings with relubrication nipple, mounted on a robust pedestal, integrated, maintenance free, self aligning radial insert ball bearings fixed by conical sleeve

Sizes 0560 up to 0800

Split pedestal cast iron bearings with relubrication nipple, mounted on a robust pedestal, integrated self aligning double row bearings fixed by conical sleeve, lubricated with long life high performance grease.

Sizes 0900 and 1000

Single piece plummer block housing, with grease nipple, mounted on robust pedestal, equipped with self aligning double row roller bearing, fixed to impeller shaft by a concentric shaft tightening, lubricated with long life high performance grease.

Performance data in accordance to DIN 24 166 tolerance class 2.

Fan data

Fan type	
Volume flow	q_v	m³/h
Total pressure increase	p_f	Pa
Static pressure	p_{sf}	Pa
Air density at fan inlet	ρ_1	kg/m³
Air medium temperature	t	°C
Shaft power	P_a	kW
Efficiency	(η_a)	
Speed	N	1/min
Sound power level (A weighted)	L_{WA}	dB
Weight	m	kg

Fittings / Accessories

- Discharge flange
- Discharge flex with flexible sleeve
- Inlet guard
- Discharge guard
- Shaft guard for free shaft end
- Matching flange
- Inspection door
- Drain plug R 1/8"
- Reinforcing side frame hot dip galvanised
- Increase corrosion protection
- Shaft made of stainless steel
- Nuts and bolts and fastening elements made of stainless steel
- Threaded hole for measurement of shock impulse(sizes 0560 up to 1000)
- Aluminium inlet cone
- Copper inlet cone, or equipped with a copper strip (from size 0630)

ADH G2E7-0250/-0560

ADH G2K2-0630/-1000

Specifications

Centrifugal twin fan ADH G2E7 / ADH G2K2

Double inlet, belt drive.

Lap jointed scroll of galvanised sheet steel assembled through a standing-seam (Sizes 0250/-0560) or by Pittsburgh lockforming (sizes 0630/-1000), fitted together to a robust assembly by means of 3 crossbars, discharge flange as an option. Welden heavy duty reinforced side frames, coated.

Both impellers, with forward curved blades, made of galvanised sheet steel, are fitted on a common shaft supported by 3 bearings (sizes 0250/-0630) or the fans have separated shafts being connected by a flexible coupling (sizes 0710/-1000), balanced in according to ISO 1940.

Straight cut off at fan discharge (sizes 0250/-0560), from size 0630 with V-cut off.

Sizes 0250 up to 0630

Single piece cast iron block housing with relubrication nipple, mounted on a robust pedestal, integrated, maintenance free, self aligning radial insert ball bearings fixed by conical sleeve.

Sizes 0710 up to 1000

Single piece cast iron block housing with relubrication nipple, mounted on a robust pedestal,

outside bearings

integrated self aligning double row roller bearings, fixed by conical sleeve, lubricated with long life high performance grease.

inside bearings

integrated single row ball bearings, fixed by eccentric clamp, lubricated with long life high performance grease.

Performance data in accordance to DIN 24 166 tolerance class 2.

Fan data

Fan type	
Volume flow	q _V	m ³ /h
Total pressure increase	p _F	Pa

Gebhardt fan systems – the "completely carefree" package for installation fans with belt drive

Fan systems with components tailored for each other, precisely assembled and adjusted, individually tested, delivered quickly and on time, allow for problem-free processing and ensure long and reliable operation.

Size has its price so we build as small as possible

- Optimised base frame lengths, tailored to the casing position and motor size and small system construction heights save valuable space in the air conditioning unit
- Various casing and drive positions allow for individual adjustment to the most diverse applications
- Optimised flat belt drives allow for efficient operation with a high level of convenience

Where required, we deliver our fan systems with safety equipment complying with DIN EN 294 for safe operation!

e.g. Belt guard

- also as segmented design
- also with inspection hole
- also with rotation speed measurement opening.

Fan set diversity

Version	Description	Figure
Pick-A-Back	for sizes 0200/-0355	
Pick-A-Back	for sizes 0400/-1000	
Compact base frame	Integrated compact base frame for sizes up to 0500.	
Base Frame, CC-profile	Base frames made from CC-profiles with length optimisation.	
Base Frame, U-profile	Heavy duty base frame made from U-profiles, welded and painted, from size 0800 upward.	

Fittings / Accessories

Drain Plug

If the fan is installed outside, or if conveying a medium containing humidity, condensation of water may accumulate inside the fan scroll.

For extraction of this water a condensate water drain has to be installed at the lowest point of the scroll.

The drain will be provided with a thread for connecting it to a piping.

At order please indicate the required casing position.

Connecting thread / hole

ADH / RDH = female thread R 1/8"

AT = drain hole

RZR 0200 / -1000 = male thread R1/2"

RZR 1120 / -1600 = male thread R 1"

Dimensions

Inspection Door

For the purposes of maintenance and cleaning there is an opening, which can be securely closed by means of an access door, in the fan casing.

As it can only be opened with a tool, the access door complies with safety and accident prevention regulations. Additional securing with locking bars can be supplied on request.

The site and orientation of the inspection opening depends on the casing position.

The position should be specified when ordering according to the following diagram: e.g. Access door, Pos. 2.

Inspection Door Positions

Dimensions in mm, subject to change.

-	500 x 500	1120/-1400	500 x 500

Fittings / Accessories

Corrosion Protection Systems

Nicotra-Gebhardt fans are treated with high quality corrosion protection as standard. Under extreme operating conditions, however, additional corrosion protection is advisable.

Depending on the use to which the fan is to be put and the degree of exposure to corrosion, we offer various anti-corrosion protection measures.

Corrosion protection - Class S40

Degreasing, ironphosphating

- **Powder coating** - Layer thickness $\geq 40\mu\text{m}$, Colour RAL 7039
- **Wet lacquering** - Layer thickness $\geq 40\mu\text{m}$ (primer + lacquer finish), Colour RAL 7039

Corrosion protection - Class K90

Degreasing, ironphosphating

- **Powder coating** Layer thickness $\geq 90\mu\text{m}$, Colour RAL 7039
- **Wet lacquering** Layer thickness $\geq 90\mu\text{m}$ (primer + lacquer finish), Colour RAL 7039

Corrosion protection - Class P100

Degreasing, ironphosphating

- **Thermoplastic powder coating** - Layer thickness $\geq 100\mu\text{m}$, Colour RAL 7001

ADH / RDH

Extended corrosion protection for series ADH, AT and RDH only available on request.

Continuously welded blades

Impeller blades can be continuously welded in order to increase the corrosion resistance when conveying a humid or slightly aggressive medium. The continuous welding has no influence on the material resistance or on the max. tip speed.

Continuously welded scroll

The casing can be continuously welded in order to increase the corrosion resistance when conveying a humid or slightly aggressive medium. By continuous welding the casing is provided with additional impermeability.

- **GEH 01** - Casing inside continuously welded
- **GEH 02** - Casing inside and outside continuously welded

Fittings / Accessories

Split Casing

There may be a lot of reasons to choose a split casing, the advantages of split casings are:

- smaller openings for fan chambers
- easier refitting of fan
- easier transport to site
- easier access to impeller for cleaning and maintenance

The joint face on the casing position runs horizontally above or under the fan axis (see drawing).

The reinforced side frames are not divisible.

The fan is supplied fully assembled.

Dimensions in mm, subject to change.

Stainless Steel Shaft

For applications where there is an increased risk of corrosion, an optional shaft made of stainless steel can be supplied.

ADH / AT / RDH

Stainless steel 1.4301 / AISI 304 / XCrNi18-10

RZR

Stainless steel 1.4305

Stainless Steel Nuts and Bolts

For applications where there is an increased risk of corrosion, the connecting elements of the fan can be ordered made of stainless steel.

Impuls Sensor Thread

A tapped hole M6 or M8 can be provided in the pedestal bearing cast housing for admission of sensors to measure the shock impulses.

(The measuring connecting piece is not included in the scope of delivery).

Fittings / Accessories

Volumeter

$$q_v = K \times \sqrt{\frac{2}{\rho} \times \Delta p_{Dü}}$$

With the flow measuring device it is possible to easily measure/monitor the flow rate after the fan is installed. A pressure tapping at a predetermined position on the inlet cone is provided whereby the differential pressure in relation to the static pressure is measured in front of the inlet cone in a static atmosphere.

- **volume flow q_v [m³/h]**
- **calibration factor K [m²s/h]**
- **density of media ρ [kg/m³]**
- **pressure difference at cone $\Delta p_{Dü}$ [Pa]**

In order to calculate the flow rate, a calibrating factor "K" is required. This factor is determined by comparative measurement on a standard test rig.

- Measuring connector in inlet cone
- Hose pipe to connecting piece in the side wall
- Connecting piece (external diameter of 6mm) for the pressure measurement

Standard-calibration faktor K10 <10%

Where fans are built into a plenum, the pressure difference between the static pressure in the inlet side plenum and the pressure on the inlet cone is to be measured. It must be ensured that the static pressure to be measured in front of the inlet cone is not tampered by dynamic pressure fractions. It is often recommended to arrange a ring of points on the wall facing the outlet side as illustrated in the sketch. When using the K-factors specified below, a minimum clearance of $0.5 \times D$ between the inlet cone of the fan and the side wall of the plenum must be maintained. Indentations that obstruct the flow to the cone can lead to faults when measuring the flow rate. In the event that the differential pressure is fed via a pressure sensor, the signal can also be used for regulating purposes.

Calibration factors

Inlet Cones

Inlet cone of copper or aluminium prevent the production of sparks during operation. These can be employed when spark protection is required, but ATEX is not mandatory.

Hot Dip Galvanised Side Frame

Fan Ranges ADH/RDH E4, E6, E7 or K, K1, K2

For applications where an increased corrosion protection is required the reinforcing side frames of the casing can be executed in hot dip galvanisation as an option.

Fittings / Accessories

Relubrications

ADH / RDH

RZR rotavent

Series RZR

The lubrication unit IWN allows the fan bearings to be greased even when in operation.

The lubrication tubes screwed into the bearing housing are lead out and fastened at the side wall of the fan. If desired, the lubrication tubes can be lead to the drive side of the fan.

- **IWN 01** - uses standard grease
- **IWN 11** - uses moisture resistant grease
-

For more details see "Technical Description" - "Bearings"!

Series ADH, RDH

The bearing housings of the fan ranges ADH/RDH E4, E6, E7 or K, K1, K2 and AT-AR, -TIC are equipped with directly fitted grease nipples.

Mounting feet

Feet made from galvanized steel, either mounted or loose, enable the fan to be installed with a 0, 90 and 270 orientation.

Protection guards

The fans are designed for installation in equipment and as standard are not equipped with protective guards.

They should not be put into operation before all protective devices are fitted and connected!

Protective measures must be carried out as set out in DIN EN ISO 12100 "Safety of machinery - Basic concepts, general principles for design".

If the application of the fan allows free access to the inlet and discharge apertures, safety devices must be put in place on the fan in accordance with DIN EN ISO 13857! Suitable safety guards are available as an optional extra.

Shaft Guards

Contact guard for the free end of the shaft for double inlet centrifugal fans. Models in accordance with DIN EN ISO 13857, made of painted steel mesh.

Flanges

Made from galvanized or painted steel, to connect ducts and system components to the fan outlet side.

Flexible Connections

Connecting piece with elastic intermediate section for the vibration or impact-noise decoupled connection of the fan to the system or unit. Made out of two connecting flanges with elastic intermediate section.

Temperature range / Application

- Standard up to +80C
- ATEX max. +60C

Fittings / Accessories

Anti Vibration Mounts

AV mounts are designed to prevent noise and vibrations being transmitted through the base of the fan.

AV mounts should be mounted beneath the fan base frame so the weight and spring deflections are evenly distributed. They should not be mounted symmetrically because a counter force is induced into the system by the pressure created by the working fan.

It is difficult for the manufacturer to establish the position of the AV mounts to suit all types of application.

Fastening for CC-profile

Fastening for U-profile

Vibration and noise insulation can also be improved by ensuring that the fan is connected to its external environment by a flexible coupling.

Rubber pads and **buffers**, for both vibration and noise insulation at fan speeds above 1400 rpm or 850 rpm.

Rubber buffers, for noise insulation only at fan speeds under 800 rpm or 1700 rpm.

Spring diffusers with noise insulation layer and height adjustment, for both vibration and noise insulation at fan speeds above 400 rpm.

Available AV mounts for different fans, see proSELECTA II.

The AVM-mounts are supplied with the suitable mounting material for the base frame.

Fan Sets

Base Frame with Belt Tensioning Device

G2Z-component size 0200/-0500 (only RZR 11/19)

This compact base frame with integrated motor tensioning slider provides optimum compactness and easiest handling.

- The base frame made of galvanized sheet steel is screwed directly onto the fan (without any casing feet) – the result being the low overall height of the system.
- The overall length depending on the casing position and size of the motor is a further factor influencing the optimum compactness.
- The integrated tensioning slider considerably simplifies re-adjustment of the belt drive during maintenance and service work.

G1Z-component size 0400/-0710

The base frames up to motor size 180 are manufactured from galvanized CC-profiles. The anti-vibration mounts in the CC-profile provide infinitely variable adjustment. From motor size 200 the base frames are of U-profile, welded and painted. Fitted motor tensioning tracks that allow the motor to be shifted longitudinally, allow for the simple adjustment of the belt tension.

G1Z-component size 0800/-1600

Base frame of stable U-profiles, welded and painted, with holes for attaching the anti-vibration mounts.

Fitted motor tensioning tracks that allow the motor to be shifted longitudinally, allow for the simple adjustment of the belt tension.

Equipment

- FKS hot-dip galvanized for U-profile base frame

Pick-A-Back

This allows the motor to be fixed directly onto the fan casing, where space around the fan is limited. One side of the pick-a-back is fixed to the casing so that it swivels, while the other is supported on a spindle. Thus the pick-a-back becomes adjustable to leave room for tensioning the drive belt. The various motor arrangements and casing positions are shown in the drawings.

The accompanying tables also show the maximum permissible motor sizes. When using a pick-a-back arrangement and fitting anti vibration mounts (AVM) an additional base frame for fitting the AVM may be required depending on the position of the centre of gravity of the whole fan set.

Fan Sets

Belt Drive Wedge Belts

High performance narrow V-belts in accordance with DIN 7753 are temperature stable up to +80 C, resistant to mineral oils and electrostatically conductive.

The belt pulleys are made of high quality cast iron and, depending on the peripheral velocity and number of grooves, are statically (G 16) or dynamically (G 6.3) balanced. They are fastened to the shaft of the motor or fan by means of a clamping bush.

Flat Belts

The flat belt drives employed are made using the most modern technology and materials. They are the centrepiece of highly developed, powerful belt drives.

This modern flat belt drive has distinct advantages over traditionally employed V-belt drives and exceeds it in efficiency, quiet running and economy.

Overview of the advantages:

- higher efficiency
- longer service life
- quieter running
- easy to install
- low maintenance
- no wear on the belt - so it is possible to dispense with the 2nd filter stage in the air conditioning unit (in accordance with VDI 6022)

Belt Guard

Totally enclosed belt guards are made from galvanised sheet steel in accordance with DIN EN 294-1.

The front section can be removed for maintenance. If there is no standard belt guard available for the selected belt drive (see table), a suitable belt guard will be made as a welded construction and then coated.

Features

- belt guard split horizontally
- access door on belt guard
- opening on belt guard for speed measuring device

Dimensions in mm, subject to change.

Fan Sets

Min. Pulley-Diameter, Bearings Life Expectancy

As a principle, the fans are only equipped with noise tested precision bearings designed for a nominal bearing life time (L_{10h} acc. to DIN ISO 281-1) of 40 000 operating hours.

In order to not exceed the admitted bearing loads there are minimum pulley diameters defined to be respected when sizing the belt drive.

The minimum pulley diameters indicated are to be applied for belt drives selected according to the state of the art and tensioned according to the prescriptions.

For flat belt drives the minimum pulley diameters are to be increased of 40% to the indicated figure!

A correct design of a belt drive may be achieved with our selection software where all relevant parameters will be kept automatically.

For correct design of a belt drive made by external means, dimensioning and the application of the tensioning forces have to be made in full respect of all specification data indicated.

Wedge Belts

L_T = Shaft Centres

b = Deflection of belt in mm under test force F_p

F_p = Test force N as prescribed by Gebhardt-Documment

Belt Tensioning

The correct tension is achieved when the test force F_p results in a deflection of 16 mm / metre of span.

Flat Belts

L_{Mu} = Measuring Marks 1 before Tensioning

L_{Mg} = Measuring Marks 1 After Tensioning

* = Stretching Values as specified by Gebhardt-Documment

Belt Tensioning

The correct belt tension is achieved when the measuring marks LMu have increased by the stretching value e^* . This should be carried out in two stages to prevent overstressing of the bearing.

Wedge- and Flat Belts

A further simple method for setting or checking the correct belt tension is via the static frequency of the drive belt.

Here the flat or V-belt is set to oscillate freely through striking it whilst stationary.

These vibrations are measured using an electronic measuring unit (e.g. a belt tension gauge). The vibration frequency in Hz must then be set to the specified value (documentation / nameplate).

[1] = Measuring point

Detailed instruction on tensioning are included within the operating and maintenance manuals.

For flat-belt-drives the listed recommended pulley diameter must be enlarged up to approx. 40%.

Description

General

The high-performance centrifugal fans are the result of extensive and systematic development work.

These technically first-rate products are distinguished by their high efficiency, the large pressure differences attainable and low noise levels.

The sizes are geometrically scaled in accordance with the standard range R 20 and the nominal size stated is the external diameter of the impeller.

Media

The fans are suitable for handling air and other non aggressive gases from -20°C up to +80°C, resp. +100°C.

The ambient temperature at the drive motor must not exceed +40°C.

Protective installations

The fans are designed for installation in equipment and as standard are not equipped with protective guards.

They should not be put into operation before all protective devices are fitted and connected!

Protective measures must be carried out as set out in DIN EN ISO 12 100 "Safety of machinery - Basic concepts, general principles for design".

If the application of the fan allows free access to the inlet and discharge apertures, safety devices must be put in place on the fan in accordance with DIN EN ISO 13857! Suitable safety guards are available as an optional extra.

Shafts

Shafts ADH/AT/RDH

The fan shafts are manufactured of ground, precisely rounded carbon steel C40. They are principally prepared without being stepped at both ends.

The shafts of the RDH K1 and K2 ranges, size 1000, as well as RDH X1 and RDH X2 sizes 1120 to 1400 are machined on both ends for fitting a pulley.

ADH / RDH / AT from size 12-9

The shafts are equipped with a keyway (open shape) at both ends and a key (type 2). AT 7-7 up to 10-10

The standard construction is the version with flats on shaft ends (type 1), it is also available the version with keyways (type 2).

For corrosion protection the shafts are galvanised up to fan size 0560 / 30-28.

From size 0630 and larger the shaft are covered, between bearing and hub, with a paint in order to ensure corrosion protection.

The shaft ends are covered with a wax product easy to remove.

Shafts RZR

The shafts are manufactured of precisely rounded carbon steel C35, pared and polished.

Up to size 1000 they are not stepped at the shaft end.

For sizes 1120 up to 1600 the shafts are machined on both ends for fitting a pulley.

The shafts are equipped with a keyway at both ends and a key executed according to DIN 6885-1

- Groove shape N2 (open) Sizes 0200 up to 1000
- Groove shape N1 Sizes 1120 up to 1600

The shafts are covered with a easily removable wax product for corrosion protection.

ADH / AT / RDH - Housing feet / Side frames

For easier installation of the fan the mounting feet and reinforcing frames are provided with eye holes.

Description

Bearings ADH/AT/RDH

**ADH E0 / ADH L
ADH E2 / ADH R
AT S / AT SC
AT G2L / AT SC2
RDH E0
RDH E2 / RDH R**

Maintenance free, self aligning radial insert ball bearings, mounted in pressed steel housing/strut assemblies with rubber interliners.

**ADH E4 / ADH K
AT AR / AT TIC / AT G2C
RDH E4 / RDH K**

Monobloc pedestal cast iron pillow block bearings with relubrication nipple, mounted on a robust frame.

Integrated, maintenance free self aligning radial ball bearings, fixed by eccentric clamp.

**ADH E6 / ADH K1 / ADH E7-0500
RDH E6 / RDH K1 / RDH E7-0500**

Pillow block cast iron bearings with relubrication nipple, mounted on a robust frame. Integrated self aligning radial ball bearings, fixed by conical sleeve and locknut.

**ADH E7-0560; ADH K2-0630/-0800
AT G2C-C2
RDH E7-0560; RDH K2-0630/-0800**

Split-type plummer block bearings with relubrication nipple, mounted on a robust frame, integrated self aligning double row ball-bearings fixed by conical sleeve, lubricated with long life high performance grease.

**ADH K2-0900-1000 / RDH K2-0900-1000
RDH X1 / RDH X2**

Single piece plummer block housing, with grease nipple, mounted on robust pedestal, equipped with self aligning double row roller bearing, fixed to impeller shaft by a concentric shaft clamp, lubricated with long life high performance grease.

Twin Fans

The twin fans up to size 0630 are equipped with one single shaft and 3 bearings. From size 0710 the two separate fans are connected by an elastic coupling. For the models G2K2 the bearings from size 0710 and larger are – due to different loads – of a different execution inside compared to outside.

Description

Bearings RZR

RZR 11-0200/-1000; RZR 12-0200/-0710 (without relubricators)

Radial insert ball bearings with spherical outer Ring mounted in pressed steel housing/strut assemblies with rubber interliners.

RZR 11-0200/-0710; RZR 12-0200/-0710 (with relubricators)

Radial insert ball bearings with spherical outer Ring mounted within cast iron housing, supported from the fan casing by tubular struts.
Relubrication is effected via extended tubes and nipples.

RZR 19-0200/-0355 (without lubricators)

Radial insert ball bearings with spherical outer Ring mounted within cast iron housing, supported from the fan casing by tubular struts.

RZR 19-0200/-0355 (with lubricators)

Relubrication is effected via extended tubes and nipples.

RZR 15-0400/-1000; RZR 19-0400/-1000 (without lubricators)

Self aligning double row ball bearings secured by adapter sleeve, mounted within a cast iron housing.

RZR 15-0400/-1000; RZR 19-0400/-1000 (with lubricators)

Relubrication is effected via extended tubes and nipples.

RZR 13-0400/-1600; RZR 18-0400/-1000 (without lubricators)

Self aligning double row ball bearings within standard plummer blocks, mounted on robust pedestal.

RZR 13-0400/-1600; RZR 18-0400/-1000 (with lubricators)

Relubrication is effected via extended tubes and nipples.

Lubricators for relubrication during operation

The Bearings are charged with long life high performance grease. Relubrication is effected via extended tubes and nipples.

See operating and maintenance instructions.

- **IWN 01** - uses standard grease
- **IWN 11** - uses moisture resistant grease

Description

Motors

Standard motors of wellknown brands, type of protection IP55, thermal class F, are used. During commissioning and maintenance the detailed instructions provided by the motor manufacturer (type plate/motor operating instructions) must be followed, this also applies to the motor protection devices required onsite. The motors are equipped with PTC resistors/temperature sensors as standard. Motors with integrated frequency inverters may be supplied on request.

EX-ATEX motors

Fan sets of centrifugal fans according to Ex-ATEX execution are equipped with motors of the correspondent category.

For frequency inverter operation the motors will be of pressure resistant execution.

Speed regulation

A suitable speed variation system is required for the optimum adjustment of the desired operating point.

Our frequency converters are perfectly tuned for the operation of *rotavent* centrifugal fans.

The use of the newest power semi-conductors guarantees high efficiency and minimum motor noise thanks to the especially fine pulse pattern.

See also the technical description "Performance".

Electric connection

Centrifugal fan systems are delivered ready for installation. The motor terminal box can be easily accessed.

Electric installation must be carried out according to the applicable provisions in compliance with local regulations. A terminal board circuit diagram showing correct connection is enclosed with every motor.

Description

Performance

The curves show the total pressure rise p_F as a function of the volume flow rate q_F plotted in a double logarithmical diagram. The throttle curves (system resistance parabolas) are then represented by straight lines.

The curves are established with a reference density of $\rho_1 = 1.2 \text{ kg/m}^3$ at the fan intake.

The pressure and impeller input power are directly proportional to density ρ_1 . Outlet velocity v_2 and the dynamic pressure p_{d2} refer to the flanged cross section area at the fan discharge.

The increase in static pressure p_{sf} when a duct is fitted to the discharge (Installation B) can be calculated from the equation:

$$p_{sf} = p_F - p_{d2}$$

Where no duct is fitted (Installation A) there is no static pressure regain. The increase in pressure p_{sf} can be calculated from formula:

$$p_{sf} = p_F - f_{pd} \times p_{d2}$$

The limits of application indicated in the fan curves (by blue dotted lines) outline the recommended functional range of the fans, where a stable operation with high efficiency can be expected.

The efficiency marked on the straight system lines is only applicable at the maximum fan speed N_{max} ; it decreases with lower fan speed.

Efficiency ADH / AT / RDH

The performance curves P_r of the fan curve diagram correspond to the absorbed power of the fan impeller.

The vertical scales shown at the right side of the diagram indicate the bearing power loss P_b of the different fan executions and depending on the fan speed.

The resulting power absorbed on fan shaft is found by adding the absorbed power P_r of the fan impeller and the bearing power losses P_b . As a consequence the resulting fan efficiency is to be calculated according to the formula:

$$\eta_a = \eta_r \times \frac{P_r}{P_r + P_b}$$

Efficiency RZR

The actual efficiency value for a fan speed lower N_{max} is calculated by multiplying the efficiency at N_{max} by the factor f_η for the appropriate speed. (f_η to be found with the scale on the right side of the page).

Motor nominal power ADH/AT/RDH/RZR

To determine the motor rating P_N , the fan absorbed shaft power P_r must be increased by a safety factor to accommodate belt drive losses and possible fan speed differences.

$$P_N \geq P_a \times f_p$$

The factor f_p is an estimated value. As an approximate value, the figures below are suggested.

ADH / AT		RDH / RZR	
$P_a < 0.75 \text{ kW}$	$f_p = 1.30$	$P_a < 0.75 \text{ kW}$	$f_p = 1.25$
$P_a \geq 0.75 \text{ kW}...< 10 \text{ kW}$	$f_p = 1.20$	$P_a \geq 0.75 \text{ kW}...< 10 \text{ kW}$	$f_p = 1.15$
$P_a \geq 10 \text{ kW}$	$f_p = 1.15$	$P_a \geq 10 \text{ kW}$	$f_p = 1.12$

Description

Performance

When selecting the motor, the run up time must be checked whether being within permitted limits.

The run up time can be worked out approximately according to the following formula:

$$t_A = \frac{8 \times J \times N^2}{P_N \times 10^6}$$

where:

t_A = run time in seconds

J = moment of inertia in kgm^2

N = fan speed in rpm

P_N = motor rating in kW

(Impeller weight and moment of inertia can be found on the performance diagram for each fan size.)

If t_A exceeds the motor manufacturer's recommendation or the tripping period of the electrical gear, a larger motor must be used or the starting gear has to be selected for heavy starting.

- 6 = Flow straightener
- 7 = Inlet cone

Performance data of twin fan units

The performance data of twin fan units (Identification "G2") can be calculated, starting from that in the corresponding operating point of a single fan, with the following formulas:

Fan Pressure: $p_{F,G2} = p_F \times 1$

Volume flow rate: $q_{V,G2} = q_V \times 2$

Fan shaft power: $P_{a,G2} = P_a \times 2,15$

Rotational speed: $N_{G2} = N \times 1,05$

Sound: $L_{WA,G2} = L_{WA} + 3 \text{ dB}$

Description

Sound

Noise measurements are undertaken in accordance with DIN 45635-38 "Noise Measurement of Machines: Fans".

Induct Method for the Discharge

The induct method is specified with DIN EN ISO 5136. It determines the sound power emitted at discharge of a test fan.

The test duct, as a main feature, is equipped with an anechoic termination fitted to avoid end reflection going back into the duct.

Envelope Method – Free Inlet

The Envelope Method is described with DIN 45 635-1 and -38, which specifies a hypothetical box shaped measurement surface with several prescribed measurement points.

- 1 = Air permeable sound screen
- 2 = Microphone positions for envelope method
- 3 = Test fan
- 4 = Measuring duct
- 5 = Microphone with sampling tube
- 6 = Anechoic termination
- 7 = Step less adjustable throttle

The sound data of the fan curves are given as "A" weighted sound power levels.

A-sound power level RZR rotavent

The "A" weighted sound power level are identical for fan intake (L_{WA7}) as well as for fan discharge (L_{WA4}).

A-sound power level ADH / AT / RDH

The "A" weighted sound power level (see curves) are apply for fan intake (L_{WA7}). The fan discharge sound power level L_{WA4} is obtained by calculating:

$$L_{WA4} = L_{WA7} + \Delta L_{Wrel4}(A)$$

The correction value $\Delta L_{Wrel4}(A)$ is found with the table (left below) at the corresponding fan curve page (ADH/RDH) by introducing fan speed and flow rate.

Description

Sound

An approximation of the "A" weighted sound pressure levels L_{PA7}/L_{PA6} at a distance of 1 m may be obtained by subtracting 7 dB from the relative "A" weighted sound power levels.

If should be noted that site acoustics, duct design, reverberation, natural frequencies etc. can all influence noise to a greater or lesser extent.

For more accurate calculations to determine noise protection measures, the sound power level in each octave band is of more value:

RZR

$$L_{Wfc7} = L_{WA4;7} + L_{Wer7}$$

$$L_{Wfc4} = L_{WA4;7} + L_{Wer4}$$

ADH / AT / RDH

$$L_{Wfc7} = L_{WA7} + L_{Wer7}$$

$$L_{Wfc4} = L_{WA7} + L_{Wer4}$$

The noise correction data L_{Wer4} und L_{Wer7} , in function of the fan speed and flow rate, are to be found with the corresponding table on the fan curve page.

In some cases the noise level - calculated by this way - may in some cases be higher than expected at the blade passing frequency.

$$f_{BP} = \frac{N \times z}{60}$$

f_s = Blade passing frequency in Hz

N = Fan speed in 1/min

z = No of blades (see curve pages)

For a free discharge situation i.e. without duct connected the sound level will be lower because of an end reflection.

This is specially true for low frequencies. For this case a correction may be applied to L_{Wfc4} of the first 3 octave bands as follows:

$$L_{Wfc6} = L_{Wfc4} + L_{Wer}$$

ADH / AT / RDH / RZR	f_m	63	125	250	Hz
0160/-0280	L_{Wer}	-14	-9	-4	dB
0315/-0800	L_{Wer}	-9	-4	-2	dB
0900/-1600	L_{Wer}	-4	-1	0	dB

Description

Explosion protection according to ATEX

Fans for use in explosive atmospheres must comply with EC Directive 94/9/EG (ATEX 95). Equipment in Group II (all applications except mining) is categorised in accordance with the required degree of safety for designated use in equipment categories 1, 2 and 3. Depending on suitability, a distinction is in addition made between G (gas, vapours) and D (dust).

Harmonised European standards and national guidelines must be observed. Equipment in class 2 and 3 is not subject to compulsory specifications nor to type testing. The manufacturer declares conformity with the EC directive.

For the standard designs of our fans, the following ignition sources are essentially to be considered:

- Hot surfaces, e.g. due to heat of friction or seizure of a bearing or due to blockage of an impeller
- Rubbing-, grinding- or beating sparks, e. g. as a result of contact of the impeller with stationary components
- Sparks resulting from discharge of electrostatically loaded, non-conducting components, e. g. of plasticpanels, surfaces with strong layer thickness.
-

Preconditions for operating:

- In the proximity of the motor, the temperature limits -20°C and +40°C must not be exceeded.
- The temperature limits of -20°C und +60°C for the flow medium must not be exceeded. If the temperature of the flow medium should exceed +60°C on the pressure side, then the fan must be switched off!
- The fans may only be employed with a horizontal shaft.
- The fans are to be protected against the falling-in or sucking-in of foreign objects. Protection guards must be ordered separately as an accessories.
- On the machine plate the max. permitted fan speed is indicated.
- Fans for operation in ex-hazardous areas are marked as such on the machine plate and they are accompanied by an EU conformity declaration and with operation and maintenance instructions.
-

The operation and maintenance instructions have strictly to be observed.

The conformity is always related to the fan system supplied.

If the fan is completed with motor and belt drive by the customer the conformity of this fan set has to be declared at new.

Fans of the series ADH / AT / RDH in ATEX-Execution on request.

Notes

Quality management system

DIN EN ISO 9001

Nicotra Gebhardt quality is the result of a continuous company policy intended to guarantee that our product properties and features are clearly superior to comparable products.

This already established company maxim led in April 1985 to the auditing and certification of the existing quality management system. In the following years it was updated to match the changing international and European standards. Modern production processes, monitored by our quality management system, guarantee a high repeat accuracy in production.

This ongoing high standard of quality permits the establishing of the performance data in classes of accuracy in accordance with DIN 24166.

The narrow tolerances ensure a high level of data reliability for our products.

Machine Safety

The fans contained in this catalogue are not machines in the sense of the EC Machine Directive. They are delivered with a manufacturer "Declaration of incorporation".

The assessment of the dangers associated with the fan and necessary safety measures are based on the VDMA Unit sheet 24167 : Fans; Safety requirements.

The operating instructions give which safety measures are still necessary on assembly to ensure that the fans comply with the Machine Directive 2006/42/EC.

Catalogue data

We reserve the right to change any measurements and technical data in this catalogue in accordance with further development of our products. All information valid at the time of printing.
